Planting Calendar by Season

A friendly getting-started guide

Gardening isn't one big spring event — it's four small seasons. This calendar gives you a place to plan what happens when, from the first cool-season crops to the final fall cleanup.

How to use it

1. **Start with your frost dates** from the Seed Starting Log. Everything hinges on them.
2. **Spring** is for cool-season crops: peas, lettuce, spinach, radishes, carrots, broccoli. These go in 2–4 weeks *before* your last frost.
3. **Summer** is for the heat lovers: tomatoes, peppers, beans, cucumbers, squash — planted after frost danger passes.
4. **Fall** gets a second round of the cool crops, plus garlic. Count backwards from your *first* frost date.
5. **Winter** is for planning, ordering seeds, and resting. You've earned it.

> **Beginner tip:** Write in pencil or expect to scribble. Weather moves dates every year, and that's normal. The calendar is a plan, not a contract.

Planting Calendar by Season

Last spring frost: _____ **First fall frost:** _____ **Year:** _____

Spring — cool season, around and before last frost

CROP	PLANT BY DATE	SEEDS OR TRANSPLANTS	NOTES

Summer — warm season, after last frost

CROP	PLANT BY DATE	SEEDS OR TRANSPLANTS	NOTES

Fall — second cool season, counted back from first frost

CROP	PLANT BY DATE	SEEDS OR TRANSPLANTS	NOTES

Winter — plan, order, and dream

TASK	TARGET DATE	NOTES (VARIETIES TO TRY, SEED ORDERS, BED REPAIRS)
